Question + plan + SQL + rows + text
Typed spec: metrics (agg, grounded column, semantic type), shape, dims, filters + polarity, date role, joins, unresolved
Type check (before trusting the answer): flag/id as quantity, shape, guessed date role, unsafe join, polarity, ratio, measure-noun count
Preservation: spec vs SQL vs rows vs text (time bounds, row shape, exclusions, numbers traceable to rows)
Violation -> CLARIFY (conf <= 0.30)
Note -> WARN with stated assumption
Exception -> CLARIFY (fail closed)
