Implementation frozen: commit 38b60d1
(backend tree 00db6e2), 526 tests pass
Separate agent authors 4 schemas, 105 questions
(74 answerable, 31 clarify/unsupported),
reference SQL + independent alt SQL; no code access
Validation (ref = alt SQL), scoring rules and
borderline list fixed; SHA-256 manifest committed
First run A0 once; raw output committed
before scoring
Ablations A1-A7, leave-one-in B1-B6:
same tree, data, scorer
Limitation: agent-generated, same model family,
not human-adjudicated
